

AFIDs: a standardized framework for evaluating anatomical correspondence between primate brains

Borna Mahmoudian , Nikoloz Sirmipilatz , Mohamad Abbass , Sarah Allarakhia , Greydon Gilmore , Geetika Gupta , Katja Heuer , P. Christiaan Klink , Roberto Toro , & Jonathan Lau

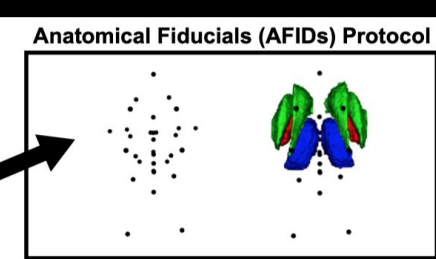

Background & Previous Work

Evaluating correspondence between brain images

Region-Based
Voxel overlap
 $A \cap B$
 $A \cup B$

Point-Based
Distance
? mm

Anatomical Fiducials (AFIDs) Protocol

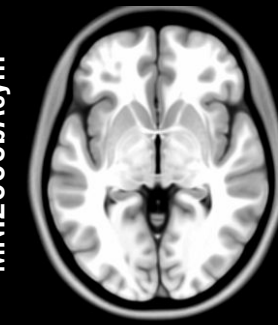

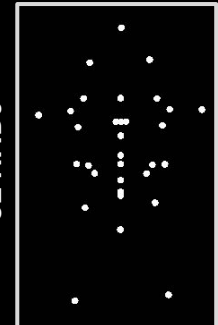

Lau et al. (2019)

Overview: Translation of Human Protocol to Macaque

MNI2009bAsym

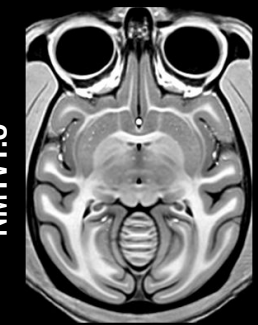

32 AFIDs

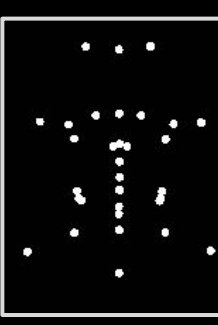

Locating homologous anatomical landmarks across species

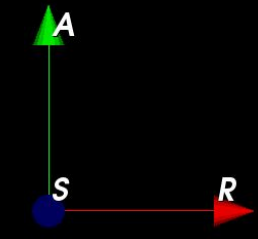

NMTv1.3

32 AFIDs

AFIDs Protocol: Human Macaque

Workflow

Materials

Templates scans (N=5)

D99 Yerkes19 INIA19

MNI macaque NMTv1.3

Single subject scans (N=8)

(N = 8)

Database

PRIMatE Resource Exchange

An open resource exchange platform for non-human primate neuroimaging

Participants

BrainWeb

8 raters recruited from the collaborative online neuroscience community

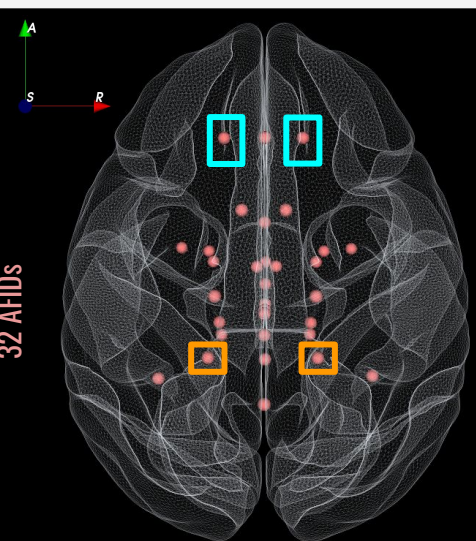

3DSlicer

32 AFIDs placed by each rater

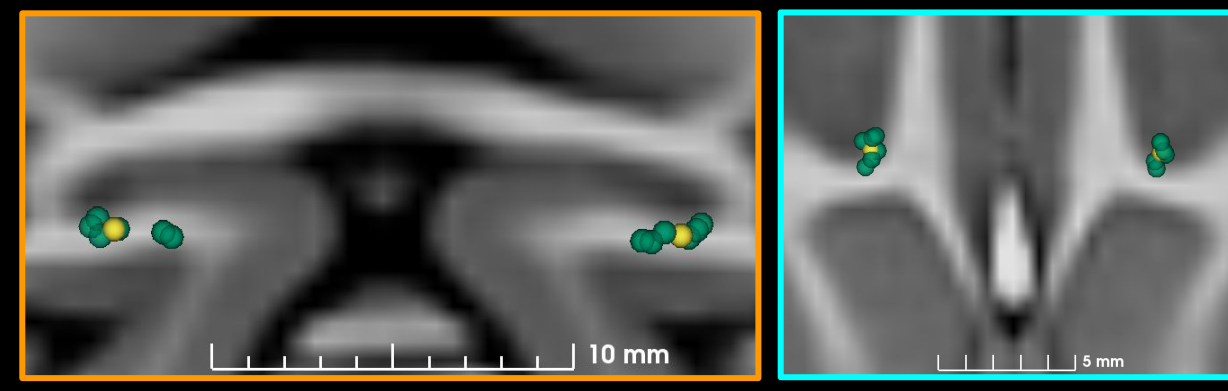

Templates (x3 rounds)

Single subjects (x2 rounds)

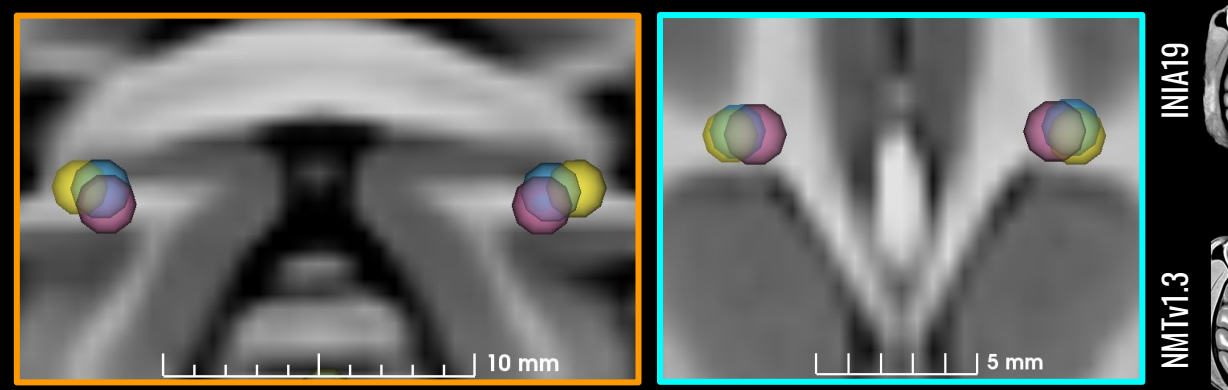

1 Placement Protocol 32 AFIDs

2 AFLE AFIDs localization error

3 AFRE AFIDs Registration Error

Web application

AFIDs Validator

Compares rater placements to protocol

Follow AFIDs

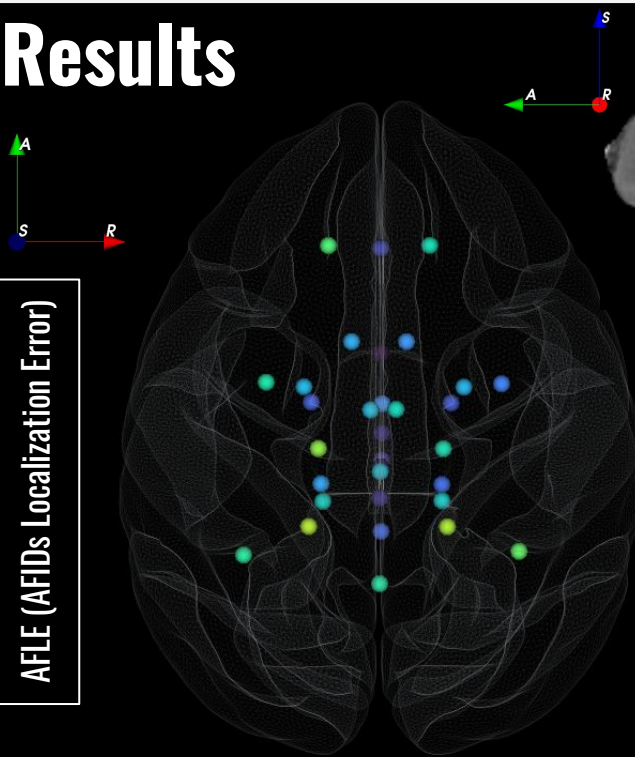

AFIDs Project website

RheMAP website

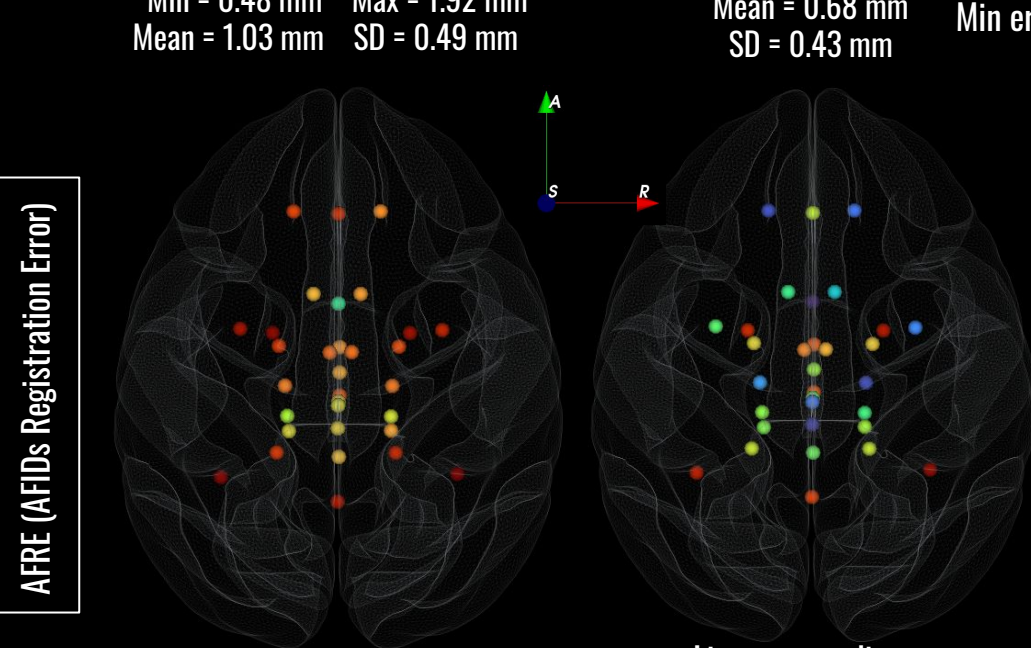

Results

AFLE (AFIDs Localization Error)

Min = 0.2 mm
Max = 0.66 mm
Mean = 0.42 mm
SD = 0.25 mm

AFRE (AFIDs Registration Error)

Linear coregistration

Linear + non-linear coregistration

Min = 0.48 mm
Max = 1.92 mm
Mean = 1.03 mm
SD = 0.49 mm

Min = 0.23 mm
Max = 1.45 mm
Mean = 0.68 mm
SD = 0.43 mm

Conclusions & future directions

- Human AFIDs protocol has been successfully extended to macaque brain images.
- Future directions will further extend this work into single subject scans, assess inter-rater AFLE, and compare distance metrics (AFIDs) with more conventional voxel overlap metrics in assessing brain correspondence accuracy of linear and non-linear coregistrations.
